PROJECT REPORT

Project Report: Digital Literacy Using Canva

In my project, I used **Canva** to design a presentation on **Digital Literacy for Beginners**, especially focusing on people from small towns and first-time internet users. Canva helped me create a clean, attractive, and easy-to-understand presentation using templates, icons, and simple layouts.

My design mainly focuses on explaining the **basic concept of digital literacy**, including what it means and why it is important in today's world. I tried to keep the language very simple so that even beginners can easily understand the content. The presentation also includes information about essential digital tools such as **Google, Gmail, and YouTube**, and how they can be used in daily life.

Another important part of my project highlights **safe internet practices**, such as creating strong passwords, avoiding unknown links, and protecting personal information online. I also included a section on maintaining a **positive and professional digital presence**, which is very important for students and job seekers.

One challenge I faced while working on this project was deciding how to present the information in a way that is both **simple and informative**. Since the target audience is beginners, I had to carefully choose words and visuals that are easy to understand without making the content too basic.

However, I found this project very interesting because it helped me learn how small digital habits—like verifying information and being careful online—can make a big difference in ensuring safety and awareness.

Overall, this project improved my understanding of **digital literacy** and also enhanced my **design and presentation skills** using Canva.
