

Digital Literacy Project Report

Name: Masoom Ali

Reg No.: 25BAI11210

Branch: B.Tech in CSE (ai & ml)

Year: 1st Year

Course Code: CSE0001

Date: 31/03/2026

Introduction

This project was completed as part of the Digital Literacy course, where I was assigned the role of a Student Digital Ambassador. The objective was to understand and demonstrate essential digital skills required in today's academic and professional environment. The project includes creating an infographic, building a digital portfolio, exploring online platforms, practising professional communication, and studying cybercrime awareness. Through these tasks, I learned how to use digital tools effectively, maintain a professional online presence, and stay safe in the digital world. This project helped me gain practical knowledge that will be useful throughout my academic journey and future career.

Task 1: Digital Literacy Infographic

For this task, I used Canva to design a one-page infographic on digital literacy awareness. The infographic covers key topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I included examples of useful tools like Google Workspace and GitHub to make it more informative for students.

While creating the design, I focused on keeping the layout simple, visually appealing, and easy to understand. One challenge I faced was selecting the right icons and arranging content properly without overcrowding the page. However, I found the process interesting because it improved my creativity and design skills. This task helped me understand how visual content can effectively communicate important information.

Task 2: Student Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and Kaggle. GitHub is used for showcasing coding projects and managing repositories, LinkedIn helps in building a professional network and career profile, and Kaggle is useful for data science practice and competitions.

On GitHub, I created a profile README that includes my name, branch, and learning goals. On LinkedIn, I added my education details and kept my profile professional. I plan to use GitHub to upload projects regularly, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve my data analysis skills.

This task helped me realize the importance of building a digital identity early in my career. It will help me in internships and placements in the future.

Task 3: Coding & Collaboration Platforms

For the coding practice part, I used HackerRank and completed a beginner-level problem. It helped me understand basic problem-solving and coding structure. Practising on such platforms improves logical thinking and programming skills.

For collaboration, I created a Google Form titled “Digital Literacy Awareness Quiz” with five questions. It included both multiple-choice and short-answer questions. I also viewed responses in Google Sheets, which helped me understand data collection and analysis.

This task showed me how online tools can support learning and collaboration. Platforms like HackerRank help in skill development, while Google Forms makes it easy to collect and analyze data efficiently.

Task 4: Email Etiquette & Communication

In this task, I wrote two professional emails—one requesting an assignment extension and another applying for an internship. I ensured both emails had clear subject lines, proper greetings, structured content, and polite sign-offs.

I also created a social media Do’s and Don’ts checklist to promote responsible online behavior. A common issue in digital communication is misunderstanding due to informal language or unclear messages. For example, sending an unstructured email without a subject line can create confusion.

This task taught me the importance of professionalism, clarity, and tone in communication. Good communication skills are essential for academic success and career growth.

Task 5: Cybercrime Awareness Case Study

For this task, I studied phishing as a type of cybercrime. Phishing involves fake emails or messages that trick users into revealing sensitive information like passwords or bank details. It usually happens through links that look genuine but lead to fraudulent websites.

Students are often targeted due to lack of awareness. The consequences include financial loss and data theft. I also created a prevention checklist with tips such as not sharing OTPs, verifying links, and using secure passwords.

What surprised me most was how easily people can be tricked by realistic messages. As a result, I will be more careful while clicking links and sharing personal information online. This task increased my awareness of online safety.

Conclusion

This project helped me develop essential digital skills such as designing content, creating professional profiles, coding practice, and understanding online safety. It improved my confidence in using digital tools and taught me responsible online behavior. Overall, this project was a valuable learning experience that will benefit me in academics and future career opportunities.
