SUB. : DIGITAL LITERACY

SUB. TEACHER : PROF KANNAN

PROJECT REPORT

Project Report: *Using HackerRank and Google Forms*

In my project, I used digital platforms like **HackerRank** and **Google Forms** to improve my technical skills and understand how digital tools can be used for learning and data collection.

Firstly, I used HackerRank to enhance my **programming and problem-solving skills**. The platform provides various coding challenges in languages like Python, Java, and C++. I practiced different types of problems based on concepts such as loops, conditions, and functions. This helped me apply theoretical knowledge in practical situations. The instant feedback feature on HackerRank allowed me to identify errors and improve my logic step by step. Although I faced some difficulty in solving complex problems at the beginning, regular practice helped me gain confidence and improve my analytical thinking.

Secondly, I used Google Forms to create an **interactive quiz** related to digital literacy. The form included multiple-choice questions and short-answer questions to test users' understanding. I also used the feature that links responses to **Google Sheets**, which automatically collected and organized the data. This made it easy to analyze responses and evaluate performance.

While working on this project, one challenge I faced was selecting the appropriate level of questions so that they are neither too easy nor too difficult for users. However, I managed to create a balanced quiz that is both informative and user-friendly.

Overall, this project helped me develop **coding skills, logical thinking, and data handling abilities**. It also improved my understanding of how digital platforms can be used effectively for both learning and assessment.
